

Dear Colleagues,

**Call for Papers: All African Symposium on Climate Change Adaptation
23rd November 2023- 10:00-17:00 CET (online)**

The International Climate Change Information and Research Programme (ICCIRP) <https://www.haw-hamburg.de/en/ftz-nk/programmes/iccirp/> in cooperation with various universities, research centres and international organisations, is organising on 23rd November 2023 the "All African Symposium on Climate Change Adaptation", as an on-line scientific event.

As the title suggests, the Symposium will provide an opportunity for researchers based in Africa and/or working on climate change issues in African countries, to present their work, studies, research, practical projects, and other scholarly initiatives on the subject matter of climate change adaptation.

Aims

Consistent with the need for more cross-sectoral interactions among the various stakeholders working in the field of climate change adaptation in Africa, the aims of the "All African Symposium on Climate Change Adaptation" are as follows:

- i. to provide research institutions, universities, NGOs, and enterprises all around Africa with an opportunity to display and present their works in the field of climate change adaptation and technologies that may help to mitigate climate change;
- ii. to foster the exchange of information, ideas, and experiences acquired in the execution of climate change adaptation projects, especially successful initiatives and good practice;
- iii. to discuss methodological approaches and experiences deriving from case studies and projects, which aim to show how the principles of climate change adaptation may be implemented in practice;
- iv. to network the participants and provide a platform so they can explore possibilities for cooperation.

Last but not least, a further aim of the event will be to document and disseminate the wealth of experiences on climate change adaptation available today across Africa. For this purpose, papers submitted and accepted will be published in the book "African Perspectives on Climate Change Adaptation".

It will follow on the success of the "African Handbook of Climate Change Adaptation"

<https://link.springer.com/referencework/10.1007/978-3-030-45106-6>.

The book is part of the Climate Change Management Series, the world's leading peer-reviewed book series on climate change

<https://www.springer.com/series/8740>, to which over 2.500 authors have contributed so far. The peer-reviewed nature of the book series means that submissions to it have been over the years officially counting as a scientific output for tenure and promotion purposes.

Abstracts may be submitted until 30th October 2023. Full submissions are due by 30th November 2023.
